WHERE DID I COME FROM?

MIXED BREED IDENTIFICATION

DNA TEST

With just a simple blood sample, the ADVANCE™ Mixed Breed Identification DNA Test can provide you and your vet information which helps to:

- Discover your dog's genetic make-up back to their great grandparents by comparing their genetic signature with more than 200 breeds, types and varieties
- Predict your dog's target genetic adult weight range
- Determine a recommended nutritional, wellness and exercise program
- Obtain a better understanding of your dog's breed-related behaviour

Pre-screening for genetic diseases also available.

KNOWLEDGE OF YOUR DOG'S DNA IS IMPORTANT TO THEIR HEALTH AND WELLBEING

The smarter you are about your dog's past, the smarter you can be about their future. Dogs are like people. They inherit physical and character traits from breeds in their family tree. They also pass along genetic disorders from generation to generation.

Your mixed breed dog is a mixed bag of genetic traits. Understanding their ancestry helps you and your veterinarian create an effective health and wellness program, as well as customise training, nutrition and medical treatment for your pet.

ADVANCE™ Mixed Breed Identification DNA Test helps to remove the guesswork for both you and your veterinarian. The test can help clear the confusion, unlocking secrets hidden in your dog's DNA.

ADVANCE™ Mixed Breed Identification DNA Test is designed and intended to be used solely to identify the genetic make-up of a mixed breed dog. It is not designed to validate the purity of a purebred dog, and test results should not be relied upon as official certification of your dog's genetic make-up, including for the purposes of the laws relating to restricted breeds.

PLEASE NOTE: Each dog is unique and their physical and behavioural traits will be the result of multiple factors including genetics, training, handling and environment. The ADVANCE™

Mixed Breed Identification DNA Test is not intended to diagnose diseases or predict behaviour in any particular dog.
